

Møller Detector Electronics Upgrading

17 August 2007

The main goal of the electronic upgrading for the Møller Polarimeter is to get more higher bandwidth (up to 200MHz) of the detector system. The replaced modules are next:

- PLU module type of LeCroy-2365 (bandwidth <75MHz)
- discriminator module type of Ortec-TD8000 (input rate <150MHz)
- TDC module type of LeCroy-2277

New Modules

Table shows the list of the new modules for upgrading.

Type	Model	Form Factor	Bandwidth
General Purpose VME Board (as PLU)	Caen V1495	VME	200 MHz
Time to Digital Converter	Caen V1190B	VME	200 MHz
Digital to Analog Converter (16ch, 12bit)	VMIVME-4140	VME	—
Leading Edge Discriminator P/S 708	P/S 708	NIM	300 MHz
Quad 300MHz Majority Logic	P/S 754	NIM	300 MHz

Module notes

- [PLU Module](#) (General Purpose VME Board [CAEN V1495](#))
- [TDC Module](#) (Time to Digital Converter VME Board [CAEN V1190B](#))
- [DAC Module](#) (Digital to Analog Converter VME Board [VMIVME-4140](#))
- [P/S 708](#) (Leading Edge Discriminator P/S 708, modified)
