Jay,

instead of the table I sent you, one can use the formula for a given beam energy E:

Q1: $B = 0.506 + 1.224 * E - 0.2167 * E * E$

Q3: $B = -0.125 + 0.461 * E + 0.0285 * E * E$

Where B is the field on the pole tip. It can be converted to GL using the factors:

Q1 9023.

Q3 7252.

Eugene
