

Target polarization dependence of the foil tension

7 July 2003

Supermendur target polarization dependence of the foil tension was founded. Four Supremendur foils with thickness of about 10,30,40 and 40 microns were measured on the Hall A Møller polarimeter magnetic stand. A prototype of a new frame for the Hall A Møller polarimeter was used for the measurements.

The plot is appended.

FOIL POLARIZATION vs. FOIL TENSION

Moller Polarimeter
